Organisation Overview – New Beginnings Foundation

New Beginnings Foundation

- Founder has been homeless
- Showered at places of worship and worked small, odd jobs to feed himself
- Saved enough to move into a backroom
- Created a landscaping company which he sold
- Now he has dedicated his life to helping people who were in his position

The founder of this initiative is Thabo Mkwanazi. Throughout his life he has been neglected and often left to his own troubles, and like most people they piled up to a point where he had no choice but to face them. For Thabo, those choices left him homeless.

He has spent over 10 years living on the streets of Johannesburg, stealing and salvaging what he can to feed into his drug addiction. Like most in this situation he believed that he was destined to die with no family or purpose; but deep-down Thabo knew that despite his bad choices, no human should ever have to suffer a reality like this, not with opportunity as abundant as it is.

To prove it to himself, he made the decision to change. He showered at places of worship and visited donation hubs to receive clean clothes and grooming supplies. With this he gained the confidence to start odd jobs, and through countless hours of hard work and saving he managed to pull himself out and move into his first property.

He used this newfound motivation and experience to start a landscaping company, which he later sold to a larger conglomerate, guaranteeing financial freedom for him and his future family.
Instead of spending this on himself Thabo decided to help the people who are still in the same situation he was in, leading to the founding of the New Beginnings Foundation.

This foundation exists to give people a second chance at life. This organisation fundamentally believes in the right for every person to have housing, and in a worsening economy many of the people who find themselves on the streets were not there by choice; many people today are a few small mistakes away from that same fate.

The mission of this NPO is to help as many homeless people as possible clean themselves up and find employment; his goal is to give the talented people who have lost motivation a second chance.

The target audience is everyone who is employed. Every single person can benefit from less homelessness in their area:

- The homeless people gain housing and employment, improving the standard of living
- Crime goes down as there are less people acting out of desperation
- Property value goes up
- Peace of mind for all residents
- Sense of pride for contributing to a greater cause

Website goals and Objectives

Goals

The goal of the website is to bring awareness and start holding people accountable. It is simple to want change but more often than not people choose not to contribute when it is time to act. This website has the sole goal of amassing as much funding as possible and reinvesting every cent in the cause.

- We will build functionality to donate and see what your donation has been allocated to, as well as functionality to choose what you want your donation to go towards
- We will have dashboards showing what was done and which area benefitted the most

KPIs

KPI's	Measure
❖ New Visitors	❖ Website reach – new traffic
❖ Bounce Rate	❖ How many visitors leave quickly
❖ Time on Page	❖ User engagement level ❖ If they are reading the history and mission statement ❖ If they are deciding on how much to donate
❖ Form Submissions	❖ Leads generated, feedback given
❖ Conversion Rate	❖ Successful actions ❖ How many people actually donate from those that visited
❖ Click-Through Rate	❖ CTA performance

Proposed Website features and functionality

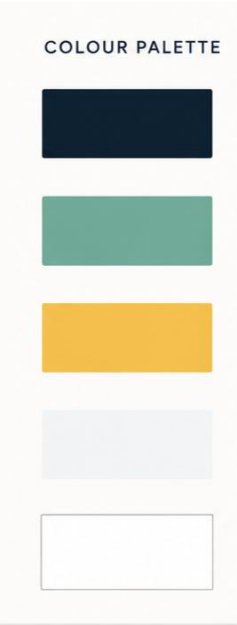

The website will have the 5 necessary pages for the project:

- Home page
    - This will have pictures of the team, our mission statement and how much has been collected from donations.
    - Should have links to all pages at the top for easier navigation
- About Us
    - Covers the youth and journey of the CEO, his mission statement and snippets from people who have said why they joined the cause
    - It'll encompass what exactly this organisation will become
    - Has links to the social media pages of the previously homeless people who have managed to turn their life around, showing that it is possible
- Donate page
    - The page will have the live count up above as well as a leaderboard of who has donated the most
    - Users will be given a choice of the most common donation amounts and a button to input their own desired amount

- Contact page
    - A way to contact either the CEO himself or the team ensuring the success of this organisation
- Feedback
    - A page to collect feedback from the donors on what other features we should add to the website or what else we can do for the people.

Design and user experience

Colour scheme

(ChatGPT, 2026)

The following colour scheme was chosen for its professional, yet welcoming and reassuring undertone.

Colour	Hex	Usage
Navy	#0D1G2A	Headings, navigation, primary text
White	#FFF	Main background
Green	#6BAF9E	Buttons, icons, accents
Gold	#F4C14A	Highlights, emphasis
Soft Gray	#F2F4F7	Content blocks, forms

Logo

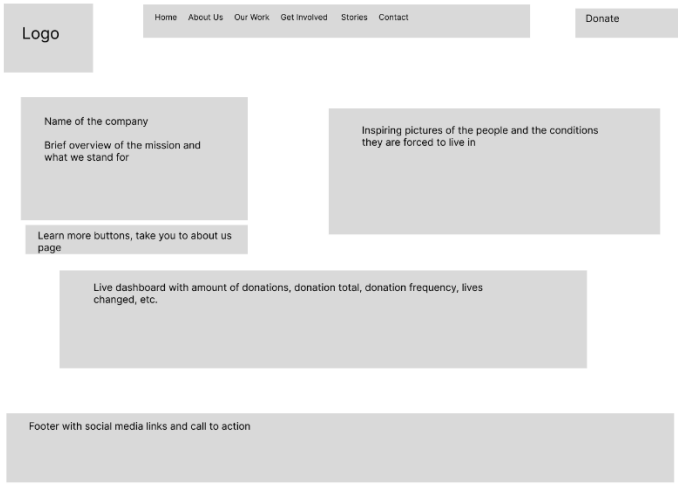

Layout and design

The goal is to present a trustworthy and welcoming place as people are betting the last bit of hope they have for a better life into this initiative. It should not only be straightforward and clear, having the website well organised ties into the professionalism and ensures that regardless of your background you can navigate and understand.

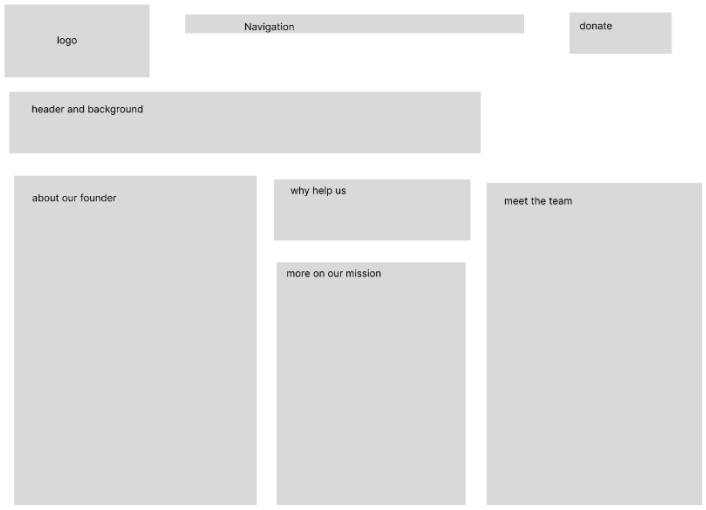

User experience considerations

Navigation will still be the same, following the basic website template of permanent “waypoints” at the top for the screen that users can use to navigate throughout the website from any page. The colour scheme being mostly blue and a soft gray gives the impression of professionalism, that this website is serious in their initiative and promises

Low fidelity wireframes

Feedback

Technical requirements

- The main project will be coded in VS Code using HTML as the core. CSS will be used for the styling and JavaScript for the functionality.
- The HTML is sourced from the IIE WEDE5020 module and its respective content alongside the public repository of the lecturer Jessel Sookha; links provided in the references section.

Timeline and milestones

- Current date → 01 September 2026
    - Defining the needs of the user and what the consumer requires. This period is for figuring out what the website will look like, the colour scheme and low-fidelity wireframes
    - By the end of this period the UX of the website should be thoroughly defined
- 01 September → 05 October 2026
    - Completing the CSS of the document after the approval of the client. This period will be building onto the already existing functionality by making it visually pleasing. It will encompass the use of stylesheets and final designs
- 06 October → 09 November 2026
    - JavaScript and SEO implementation. This period will be adding the functionality of the website, the buttons, math logic and any feature that the client has specified within this brief.

From the above the completion of one section marks a milestone done. The deadline acts as a timekeeper to ensure that the creation of the website is thoroughly spaced out and nothing is rushed.

Budget

- The estimate for a fully custom website, which is what is needed here can cost upwards of R100,000, (New Perspective Design, 2026).
- The website proposed here needs a fully functional website immediately, leading to high upfront costs and a lower monthly costs for maintenance, SEO and future updates. The cost usually adds up because each unique page can range from a couple of thousand to close to R20,000 for e-commerce functionality, which this website will need.
- Basic hosting and maintenance ranges from R299 – R499 monthly. But based off of my assessment this website would need an e-commerce functionality and would need to be actively marketed, raising the price to R1,500 per month.
